Item            Spectrum analyzer 20 Hz - 50 GHz, -145 - 30 dBm

Manufacturer   ROHDE & SCHWARZ

Type            FSU50

Material No.   1166.1660K50    Serial No.       200061

This certificate documents the calibration of the indicated item. Calibration is performed with standards traceable to national/international standards, which realize the physical units of measurement according to the International System of Units (SI). Measurement results are located within the corresponding uncertainty with a probability of approximately 95% (coverage factor k=2). Unless otherwise specified, verification is against manufacturer's specifications.

 Harold Frank Hall, Rm 1160  
 SANTA BARBARA CA 93106-9560

Order No.       UC-102913163351

Date of Receipt 2013-11-08

For results in the measurement uncertainty guard band (UGB), it is not possible to state compliance with specification based on the 95% level of confidence. However, a within-specification result indicates compliance is more probable than noncompliance and an out-of-specification result indicates noncompliance is more probable than compliance. Policies and procedures for Standard Calibrations are based on ISO/IEC 17025:2005, ANSI/NCSL Z540.3-2006, and ANSI/NCSL Z540.1-1994 (R2002). The ISO 9001 Calibration is based on the manufacturer's procedure. The quality management system is certified to ISO9001:2008.

The calibration certificate may not be reproduced other than in full. Calibration certificates without signatures are not valid.

**Notes**

The user is obliged to have the item recalibrated at appropriate intervals.  
Depending on installed options, test report page numbers may not be consecutive.  
Serial numbers with xxxxxx/xxx format are shown with a leading zero after the slash: xxxxxx/0xxx.

**Incoming Remarks:**

Unit found to be operating out of specifications for the following tests: 7, 11, 12, 21 and 22. Test: Third Order Intercept Point (TOI) < 8GHz has Invalid result. Please see incoming test data for details.

**Outgoing Remarks:**

Unit is operating in compliance with specifications.

**The following abbreviations may be used in this document**

- {a} No measurement uncertainty stated because the errors always add together. So it is sure that a measurement result evaluated as "PASS" is pass.
- {b} The measurement uncertainty depends on the measurement result. The stated measurement uncertainty is valid for the close area around the specification. Measurement results outside the close area have a higher measurement uncertainty but are within the specification.
- {c} Functional test, therefore no measurement uncertainty is stated.
- {d} Typical value, refer to performance test.
- {e} The measurement uncertainty is taken into account when setting the measuring system.
- DL or DT Data Limit for symmetrical tolerance limits
- DLL Datasheet Lower Limit
- DUL Datasheet Upper Limit
- MU Symmetrical Measurement Uncertainty
- MLL or MLV Measurement Uncertainty Lower Value
- MUL or MUV Measurement Uncertainty Upper Value
- Nom. Nominal Value
- Dev. Deviation
- MErr. Measurement Error
- Act. Actual Value
- UGB Uncertainty Guard Band: Measuring uncertainty violates the data (spec.) limit.
- UGB1 Measurement results marked as UGB1 show conformity with a probability of >50 % and <95 %.
- UGB2 Measurement results marked as UGB2 show non-conformity with a probability of >50 % and <95 %.
- DU Datasheet Uncertainty

**The following abbreviations may be used in this document**

- {a} No measurement uncertainty stated because the errors always add together. So it is sure that a measurement result evaluated as "PASS" is pass.
- {b} The measurement uncertainty depends on the measurement result. The stated measurement uncertainty is valid for the close area around the specification. Measurement results outside the close area have a higher measurement uncertainty but are within the specification.
- {c} Functional test, therefore no measurement uncertainty is stated.
- {d} Typical value, refer to performance test.
- {e} The measurement uncertainty is taken into account when setting the measuring system.
- DL or DT Data Limit for symmetrical tolerance limits
- DLL Datasheet Lower Limit
- DUL Datasheet Upper Limit
- MU Symmetrical Measurement Uncertainty
- MLL or MLV Measurement Uncertainty Lower Value
- MUL or MUV Measurement Uncertainty Upper Value
- Nom. Nominal Value
- Dev. Deviation
- MErr. Measurement Error
- Act. Actual Value
- UGB Uncertainty Guard Band: Measuring uncertainty violates the data (spec.) limit.
- UGB1 Measurement results marked as UGB1 show conformity with a probability of >50 % and <95 %.
- UGB2 Measurement results marked as UGB2 show non-conformity with a probability of >50 % and <95 %.
- DU Datasheet Uncertainty

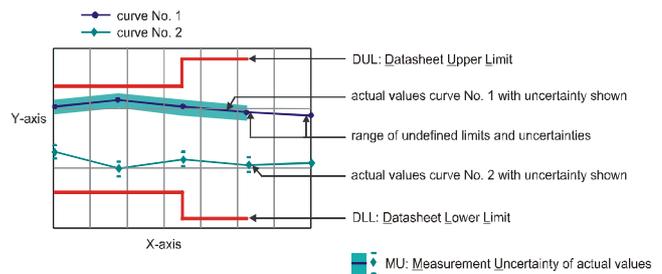

**Explanation of charts**
