

Contents

I	Introduction	1
1	Noncooperative Games	3
1.1	Elements of a Game	3
1.2	Cooperative vs. Noncooperative Games: Rope-Pulling	4
1.3	Robust Designs: Resistive Circuit	7
1.4	Mixed Policies: Network Routing	8
1.5	Nash Equilibrium	9
1.6	Practice Exercise	10
2	Policies	11
2.1	Actions vs. Policies: Advertising Campaign	11
2.2	Multi-Stage Games: War of Attrition	13
2.3	Open vs. Closed-Loop: Zebra in the Lake	16
2.4	Practice Exercises	17
II	Zero-Sum Games	19
3	Zero-Sum Matrix Games	21
3.1	Zero-Sum Matrix Games	21
3.2	Security Levels and Policies	22
3.3	Computing Security Levels and Policies with MATLAB [®]	23
3.4	Security vs. Regret: Alternate Play	23
3.5	Security vs. Regret: Simultaneous Plays	24
3.6	Saddle-Point Equilibrium	24
3.7	Saddle-Point Equilibrium vs. Security Levels	26
3.8	Order Interchangeability	27
3.9	Computational Complexity	27
3.10	Practice Exercise	28
3.11	Additional Exercise	29
4	Mixed Policies	31
4.1	Mixed Policies: Rock-Paper-Scissor	31
4.2	Mixed Action Spaces	33
4.3	Mixed Security Policies and Saddle-Point Equilibrium	33
4.4	Mixed Saddle-Point Equilibrium vs. Average Security Levels	36
4.5	General Zero-Sum Games	37
4.6	Practice Exercises	40
4.7	Additional Exercise	44

5	Minimax Theorem	45
5.1	Theorem Statement	45
5.2	Convex Hull	46
5.3	Separating Hyperplane Theorem	47
5.4	On the Way to Prove the Minimax Theorem	47
5.5	Proof of the Minimax Theorem	49
5.6	Consequences of the Minimax Theorem	50
5.7	Practice Exercise	50
6	Computation of Mixed Saddle-Point Equilibrium Policies	53
6.1	Graphical Method	53
6.2	Linear Program Solution	54
6.3	Linear Programs with MATLAB [®]	55
6.4	Strictly Dominating Policies	56
6.5	“Weakly” Dominating Policies	58
6.6	Practice Exercises	59
6.7	Additional Exercise	61
7	Games in Extensive Form	63
7.1	Motivation	63
7.2	Extensive Form Representation	64
7.3	Multi-Stage Games	64
7.4	Pure Policies and Saddle-Point Equilibria	64
7.5	Matrix Form for Games in Extensive Form	66
7.6	Recursive Computation of Equilibria for Single-Stage Games	68
7.7	Feedback Games	70
7.8	Feedback Saddle-Point for Multi-Stage Games	70
7.9	Recursive Computation of Equilibria for Multi-Stage Games	73
7.10	Practice Exercise	75
7.11	Additional Exercises	75
8	Stochastic Policies for Games in Extensive Form	77
8.1	Mixed Policies and Saddle-Point Equilibria	77
8.2	Behavioral Policies for Games in Extensive Form	79
8.3	Behavioral Saddle-Point Equilibria	80
8.4	Behavioral vs. Mixed Policies	81
8.5	Recursive Computation of Equilibria for Feedback Games	82
8.6	Mixed vs. Behavioral Order Interchangeability	83
8.7	Non-Feedback Games	83
8.8	Practice Exercises	83
8.9	Additional Exercises	90
III	Non-Zero-Sum Games	91
9	Two-Player Non-Zero-Sum Games	93
9.1	Security Policies and Nash Equilibria	93
9.2	Bimatrix Games	94
9.3	Admissible Nash Equilibria	96
9.4	Mixed Policies	97
9.5	Best-Response Equivalent Games and Order Interchangeability	98
9.6	Practice Exercises	100
9.7	Additional Exercises	102

10	Computation of Nash Equilibria for Bimatrix Games	103
10.1	Completely Mixed Nash Equilibria	103
10.2	Computation of Completely Mixed Nash Equilibria	105
10.3	Numerical Computation of Mixed Nash Equilibria	106
10.4	Practice Exercise	108
10.5	Additional Exercise	110
11	<i>N</i>-Player Games	111
11.1	<i>N</i> -Player Games	111
11.2	Pure <i>N</i> -Player Games in Normal Form	113
11.3	Mixed Policies for <i>N</i> -Player Games in Normal Form	113
11.4	Completely Mixed Policies	114
12	Potential Games	117
12.1	Identical Interests Games	117
12.2	Potential Games	118
12.3	Characterization of Potential Games	121
12.4	Potential Games with Interval Action Spaces	122
12.5	Practice Exercises	124
12.6	Additional Exercise	126
13	Classes of Potential Games	127
13.1	Identical Interests Plus Dummy Games	127
13.2	Decoupled Plus Dummy Games	128
13.3	Bilateral Symmetric Games	129
13.4	Congestion Games	129
13.5	Other Potential Games	130
13.6	Distributed Resource Allocation	131
13.7	Computation of Nash Equilibria for Potential Games	134
13.8	Fictitious Play	136
13.9	Practice Exercises	139
13.10	Additional Exercises	145
IV	Dynamic Games	147
14	Dynamic Games	149
14.1	Game Dynamics	149
14.2	Information Structures	150
14.3	Continuous-Time Differential Games	151
14.4	Differential Games with Variable Termination Time	154
15	One-player Dynamic Games	155
15.1	One-Player Discrete-Time Games	155
15.2	Discrete-Time Cost-To-Go	156
15.3	Discrete-Time Dynamic Programming	156
15.4	Computational Complexity	160
15.5	Solving Finite One-Player Games with MATLAB®	161
15.6	Linear Quadratic Dynamic Games	162
15.7	Practice Exercise	163
15.8	Additional Exercise	163

16 One-Player Differential Games	165
16.1 One-Player Continuous-Time Differential Games	165
16.2 Continuous-Time Cost-To-Go	165
16.3 Continuous-Time Dynamic Programming	166
16.4 Linear Quadratic Dynamic Games	169
16.5 Differential Games with Variable Termination Time	170
16.6 Practice Exercise	171
17 State-Feedback Zero-Sum Dynamic Games	175
17.1 Zero-Sum Dynamic Games in Discrete Time	175
17.2 Discrete-Time Dynamic Programming	176
17.3 Solving Finite Zero-Sum Games with MATLAB®	179
17.4 Linear Quadratic Dynamic Games	179
17.5 Practice Exercise	182
18 State-Feedback Zero-Sum Differential Games	187
18.1 Zero-Sum Dynamic Games in Continuous Time	187
18.2 Linear Quadratic Dynamic Games	189
18.3 Differential Games with Variable Termination Time	191
18.4 Pursuit-Evasion	192
18.5 Exercise	193
Bibliography	195
Index	197
