Index

- adjoint matrix, 37
- aircraft roll dynamics, 228–230, 250, 268
- algebraic equivalence, 40, 43, 44
- algebraic Riccati equation (ARE), 101, 214, 215, 217–222, 241
- applied forces vector, 14
- ARE, *see* algebraic Riccati equation

- basis, 40, 111, 119, 120, 124, 136, 167, 219–222
 - canonical, 46, 48, 54, 91, 161
 - change of basis matrix, 63, 64
- BIBO, *see* Bounded-input, bounded-output stability
- block diagram, 7–10, 68, 137, 166–167
- Bode integral formula, 225, 226
- bounded-input, bounded-output stability (BIBO)
 - continuous time, 89–97, 162, 206, 208
 - discrete time, 94
- Bryson’s rule, 212, 215

- cascade interconnection, 8, 67
- causality, 25, 28, 29, 33, 43, 50
- Cayley-Hamilton theorem, 55, 61, 114, 118, 126, 137, 146
- centrifugal/Coriolis/friction matrix, 14
- certainty equivalence, 239
- characteristic polynomial, 37, 55–56, 88, 132, 146, 179, 191
- cheap control, 230–233
 - closed-loop poles, 231–232
 - LQR cost, 232–233
- closed-loop state estimator, 171
- cofactor, 37, 43
- cofactor matrix, 37
- comparison lemma, 78
- complementary sensitivity function, 225
- complete sequence, 262, 263
- conservative force, 14, 15
- conservative forces vector, 14
- constructibility Gramian, 171, 240
 - continuous time, 153–154
 - discrete time, 155–156
- constructible system
 - continuous time, 151, 153
 - discrete time, 155
- continuous-time system, 5
- controllability Gramian, 120
 - continuous time, 111–115
 - discrete time, 116–119
 - infinite time, 127
- controllability matrix, 114–119, 135, 146, 182
- controllability subspace, 120
- controllability test
 - controllability matrix, 123
 - eigenvector, 125, 130, 131, 208, 222, 251
 - Lyapunov, 126, 128–129
 - Popov-Belevitch-Hautus (PBH), 126
- controllable subspace, 121
- controllable canonical form, 38, 39, 43, 131, 146, 179
- controllable decomposition, 135–138
- controllable-from-the-origin subspace, *see* reachable subspace
- controllable state component, 137
- controllable subspace, 136, 167
 - continuous time, 107–112
 - discrete time, 116–119
- controllable system, 94, 123, 130, 131, 133, 142, 146, 160, 162, 163, 175, 182, 200, 208
- controllable-to-the-origin subspace, *see* controllable subspace
- controlled output, 212, 255, 260, 264
- control specification, 259–261, 265–267
 - convexity, 262, 269
- convolution
 - continuous time, 29
 - discrete time, 31
 - Laplace transform, 32
 - \mathcal{L} transform, 33
- coprime
 - fraction, 179

- polynomials, 179, 187
- CVX, 263, 265–268
 - cvx_begin, 265
 - cvx_end, 265
 - minimize, 267
 - variable, 265, 267
- degree of a transfer function, 179
- detectability test
 - eigenvector, 170
 - Lyapunov, 170
 - Popov-Belevitch-Hautus (PBH), 170
- detectable system, 168–170, 172, 222
- diagonalizable matrix, 64, 182
- diagonal system, 160, 173, 182
- discrete-time system, 6
- disturbance rejection, 235
- domain of the Riccati operator, 218
- duality
 - controllability/observability, 156–157
 - reachability/constructibility, 156–157
- dual algebraic Riccati equation, 243, 251
- dual ARE, *see* dual algebraic Riccati equation
- eigenvalue assignment, 131, 133
 - output injection, 171–172
 - state feedback, 129–145
- eigenvector test
 - controllability, 125, 130, 131
 - detectability, 170
 - observability, 158, 160, 163
 - stabilizability, 142
- equilibrium point
 - continuous time, 11
 - discrete time, 13
- equivalence transformation, *see* similarity transformation
- exogenous input, 255, 260, 264
- feasibility problem, 262
- feedback invariant, 100–101, 213–216
- feedback linearization, 16–18, 24
- forced response, 28, 47
- fundamental theorem of linear equations, 111, 126
- gain margin, 224
- generalized coordinates vector, 14
- generic property, 67
- greatest common divisor (gcd), 188
- Hamiltonian matrix, 104, 217–222, 231–232, 238
- homogeneous response, 27, 35, 47
- homogeneous system, 45, 53, 74, 80
- hovercraft, 16, 20
- Hurwitz matrix, *see* stability matrix
- H-infinity norm, *see* root mean square gain
- image of a matrix, 111
- impulse response, 33, 60
 - continuous time, 27–29, 32, 35–36
 - discrete time, 31, 36
- infinite-dimensional systems, 27
- initial condition, 5–7, 12, 13, 25, 26, 36, 40, 41, 45, 47, 73, 74, 79, 89, 94
- input-output model, 5, 6
- internal stability, *see* Lyapunov stability
- invariant subspace, 121
- invariant subspace, 59, 124, 167, 222
- invariant zero polynomial, 196
- inverse system, 203–208
 - left inverse, 204
 - right inverse, 204
- inverted pendulum, 15, 22, 24, 84
- irreducible realization, *see* realization
- Jordan normal form, 63–68, 76, 87, 88, 222
- Kalman
 - decomposition theorem, 166–168, 199
 - equality, 223–224, 226, 237
 - inequality, 224–226
- Kalman-Bucy
 - filter, 244
- kernel of a matrix, 111
- lag compensator, 236–237
- Laplace transform, 30, 32–33, 35, 56
 - convolution, 32
 - derivative, 32
- lead compensator, 236–237
- least common denominator (lcd), 190
- left-inverse matrix, 178
- Liénard equation, 88
- linearity, 26, 43, 50
- linear matrix inequality (LMI), 77, 128, 144
- linear quadratic Gaussian estimation (LQG), 244
- linear quadratic regulation (LQR), 99–102, 211–215, 223–230
- linear time-invariant (LTI) system, 6
- linear time-varying (LTV) system, 6
- L_∞ norm, 260
- LMI, *see* linear matrix inequality
- local linearization, 11–14, 88
 - around equilibrium point in continuous time, 12, 19, 22–23, 80–85, 97, 133, 163

- around equilibrium point in discrete time, 13, 85
 - around trajectory, 14, 20, 24
- loop shaping, 226–228
- loop transfer recovery (LTR), 245, 250
- LQG, *see* linear quadratic Gaussian estimation
- LQG/LQR controller, 244, 245
 - Q-augmented, *see* Q-augmented LQG/LQR controller
- LQR, *see* linear quadratic regulation
- LTI, *see* linear time-invariant system
- LTR, *see* loop transfer recovery
- LTV, *see* linear time-varying system
- Lyapunov equation, 126, 129
 - continuous time, 77, 88, 128
 - discrete time, 80
- Lyapunov inequality, 145
 - continuous time, 77, 128
 - discrete time, 80
- Lyapunov stability
 - asymptotic stability, 73, 75, 76, 79, 80, 127, 142, 145, 169, 172
 - continuous time, 73–79, 86–88, 96, 97, 102, 133, 163
 - discrete time, 79–80, 88
 - exponential stability, 73, 75, 76, 79, 80, 82, 127
 - instability, 73, 75, 79, 80, 83
 - marginal stability, 73, 75, 79
 - stability margin, 88
- Lyapunov stability theorem
 - continuous time, 76–79, 127–128
 - discrete time, 80
- Lyapunov test
 - controllability, 126
 - detectability, 170
 - observability, 158
 - stabilizability, 144
- magnetically suspended ball, 163
- Markov parameters, 176–178
- mass matrix, 14
- MATLAB
 - append, 10

 - svd, 74, 119
 - syms, 57
 - tf, 40, 41, 264
 - zpk, 40, 41
 - ztrans, 59
 - Simulink, 9
 - symbolic computations, 57–59
- matrix exponential, 53–56, 59–61, 66–69, 86–88
- matrix norm, 74–75, 87
 - submultiplicative, 74, 87
 - subordinate, 74, 87
- matrix power, 57, 61, 65, 68, 69
- McMillan degree, 191, 198–200, 206
- measured output, 211
- mechanical systems, 14–16
 - fully actuated, 16
- MEE, *see* minimum-energy estimation
- memoryless system, 5, 33
- MI, *see* multiple-input system
- MIMO, *see* multiple-input, multiple-output system
- minimal realization, *see* realization
- minimum-energy
 - control, 113
 - estimation (MEE), 240–244
- minimum-phase system, 206
- MISO, *see* multiple-input, single-output system
- MO, *see* multiple-output system

- model matching control, 42, 44
- monic polynomial, 179
- multiple-input, multiple-output system (MIMO), 5
- multiple-input, single-output system (MISO), 5
- multiple-input system (MI), 5
- multiple-output system (MO), 5
- multiplicative unmodeled dynamics, 225

- negative-definite matrix, 76
- negative-feedback interconnection, 8
- negative-semidefinite matrix, 76, 222
- noise rejection, 236
- nonholonomic integrator, 133
- norm
 - ∞ -norm, 75
 - Frobenius norm, 75
 - H-infinity, *see* root mean square gain
 - L_1 , 260, *see* peak gain
 - L_2 , 260
 - L_∞ , 260
 - one norm, 75
 - two norm, 74
- null space of a matrix, *see* kernel of a matrix
- nullity of a matrix, 111
- Nyquist
 - plot, 224, 234
 - stability criterion, 234

- observable system, 163
- observability Gramian, 171
 - continuous time, 153–154
 - discrete time, 155–156
- observability matrix, 157, 165, 182
- observability test
 - eigenvector, 158, 163
 - Lyapunov, 158
 - Popov-Belevitch-Hautus (PBH), 158, 163
- observable canonical form, 39, 43
- observable decomposition, 165–166
- observable state component, 166
- observable system, 94, 160, 162, 169, 171–173, 175, 182, 200, 208

- overactuated system, 246
- overshoot, 235, 260, 266, 267

- parallel interconnection, 7, 68, 151
- peak gain, 261, 267
- Peano-Baker series, 45, 53
- pendulum, 22
- phase margin, 225, 235
- pole placement, *see* eigenvalue assignment
- pole polynomial, *see* characteristic polynomial
- poles, 96, 191, 195, 198
 - SISO, 179, 187
- Popov-Belevitch-Hautus (PBH) test
 - controllability test, 126
 - detectability test, 170
 - observability test, 158, 163
 - stabilizability, 143
- positive-definite matrix, 76, 146
- positive-semidefinite matrix, 76, 222
- prefilter, 259
- proofs
 - by contradiction, 78, 91, 118
 - by contraposition, 91, 125
 - direct, 37
 - equivalence, 37, 77, 125
 - set equality, 112
- proper rational function, 37
- proportional-derivative (PD) control, 16
- proportional (P) control, 236
- pseudoinverse matrix, 178, 246

- Q-augmented LQG/LQR controller, 253–257, 259, 264
- Q design, 262–269
- Q parameterization, 253–256
- Q system, 253, 262

- range of a matrix, *see* image of a matrix
- rank of a matrix, 111, 177
- reachability Gramian
 - continuous time, 111–115
 - discrete time, 116–119
 - infinite time, 127
- reachable subspace
 - continuous time, 107–112
 - discrete time, 116–119
- reachable system, 123
- realization, 37, 42, 160, 162
 - minimal, 104, 175–182, 197–199, 208
 - order of, 175, 197–199
 - SISO, 39, 43
- real polynomial matrix, 188
 - determinantal divisors, 188
 - invariant factors, 189
 - minors, 188

- rank, 188
 - unimodular, 189
- real rational matrix, 190
- reference tracking, 235
- relative degree, 226, 237
- Riemann integral, 32
- right-inverse matrix, 178
- Ritz approximation, 262–264
- RMS gain, *see* root mean square gain
- robot arm, 15
- roll-off rate, 228
- root locus, 232
- root mean square gain, 261, 267
- Rosenbrock's system matrix, 196, 246

- satellite motion, 132
- Schur stable matrix, 57, 65, 80, 158
- semigroup property, *see* state transition matrix
- semisimple matrix, *see* diagonalizable matrix
- sensitivity function, 225
- separation principle, 173, 244, 251
- separation theorem, *see* separation principle
- set-point control, 229, 246–249, 251
- settling time, 260, 266
- SI, *see* single-input system
- similarity transformation, 40, 135–138, 165–168, 177–178
- SIMO, *see* single-input, multiple-output system
- Simulink, *see* MATLAB
- single-input, multiple-output system (SIMO), 5, 42, 160, 162
- single-input, single-output system (SISO), 5
- single-input system (SI), 5
- single-output system (SO), 5
- SISO, *see* single-input, single-output system
- sliding-mass system, 18
- Smith
 - factorization, 189
 - form, 188–189, 196, 198
- Smith-McMillan
 - factorization, 190
 - form, 189–193, 195, 198–200, 205
- SO, *see* single-output system
- spring-mass system, 18
- square completion, 101, 144, 146, 214
- stability matrix, 56, 67, 75, 77, 87, 126, 127, 158, 215
- stabilizability test
 - eigenvector, 142
 - Lyapunov, 144–145
 - Popov-Belevitch-Hautus (PBH), 143
- stabilizable system, 141–145
- stabilization
 - output feedback, 172–173
 - state feedback, 128–129, 145
- stabilizing solution to the ARE, 218
- stable subspace, 219, 222
- standard form for
 - uncontrollable systems, 136, 141
 - unobservable systems, 166, 169
- state estimation, 163, 170–171
- state estimation error, 171
- state feedback, 149, 170
- state reconstruction
 - Gramian-based in continuous time, 154
 - Gramian-based in discrete time, 155
- state transition matrix, 49, 50, 87, 97, 120
 - continuous time, 45–47
 - discrete time, 48
 - inverse, 47, 48
 - semigroup property, 46, 48
- Stein equation, *see* Lyapunov equation, discrete time
